

(Force moved) ÷ (Force applied) = AMA
AMA ÷ IMA = % Efficiency

For each diagram

- 1pt Name the machine
- 1pt Determine Ideal Mechanical Advantage
- 1pt Determine Actual Mechanical Advantage
- 1pt Determine the efficiency of the machine

$(\text{Force moved}) \div (\text{Force applied}) = \text{AMA}$
 $\text{AMA} \div \text{IMA} = \% \text{ Efficiency}$

The screw-jack lifts 420N using 10N of force, what is the AMA and % efficiency?

Handle length is 0.5M
 Pitch = 0.05M
